EXPERIENCE

Symfony 6-7 Software Developer — **January 2025- Present**
nosfair GmbH

- Built Venue management and Booking system with API contracts for calendar UI and CRUD from the ground up.
- Refactor, revitalize, and modernize old Symfony codebases for improving clarity of business domain, security, and developer experience. Lots of focus on making the codebases more usable and intuitive for other devs.
- Rewrite Bank auth system for Microsoft OIDC via symfony authenticators.
- Developed application for integration of ERP Data layers with Shopware API, with data mapping and coordination services.
- Generally a big emphasis on DDD, CLEAN and SOLID architecture, Object DB serialization and relationless DB tables with PostgreSQL and MySQL.

Full Stack Developer — **January 2022 - December 2024**
Maklaro GmbH

- Symfony 6 backend of a Domain Driven Design flavour. Implemented and designed many business concepts with the powerful Symfony framework.
- Emphasis on Object Oriented, SOLID, and CLEAN architectural principles, with Asynchronous Message handling.
- Particular focus: Symfony Form, Symfony Router, EasyAdmin, Symfony Serializer (and serialized JSON data structures), Mailer, PHPUnit, PostgresQL Database, AWS S3 Storage, Docker and Github CI.
- Responsible for coordinating with various external business teams in English and German to determine project requirements.

Senior Full Stack Developer — **September 2018 - January 2022**
Fitfox by Sportscheck GmbH

- Frontend development with React / Typescript and team-designed framework. Became primarily responsible for implementing architectural aspects of frontend code: layered architecture for services supporting the UI lifecycles and data management, dependency inversion through DI, as well as planning and designing the overall architecture of the application.
- In 2019 began doing work in the Symfony backend and became responsible for implementing multiple features for Symfony 4&5 architecture in PHP as well as managing the integration of Backend and

Frontend architectures. Implemented and designed multiple business concepts with the Symfony framework. Emphasis on DI, CQRS, SOLID and OOP architectural principles, and Asynchronous Message handling.

Full Stack Dev Student **October 2017 - September 2018**
Freelance

- Created more than 6 full-stack Javascript projects running in production.
- Developed an application to solve an administrative need that is currently in use by family members.
- Worked on teams of 2-5 developers to create full-stack applications intended to meet real-world needs, making use of test suites with mocha and chai, continuous integration with TravisCI, and deployment with Heroku and Netlify.

Desktop Engineer **November 2015 - October 2017**
Athens Micro

- Onsite and remotely managing and troubleshooting business computer networks, network technology, web, ftp, active directory, and file servers, and performing business disaster recovery ops.
- Enforcing and supporting best practices in computer networks for companies with more than 200 employees.
- Individually responsible for leading proactive and responsive tech support for more than 15 of the company's client businesses.
- Boot sector repair, Operating system Recovery and Troubleshooting, Data Recovery, OS upgrades, Server Maintenance, server software and hardware upgrades.
- Active Directory setup, management, and administration, Group Policy best practice creation and enforcement, Internal and external DNS management.
- HP, Cisco, Linksys, PFSense, Sonicwall, switch and firewall setup, management, and configuration.
- Business network security best practice enforcement, Network troubleshooting and setup.
- Disaster Recovery via Dell RapidRecovery and Appassure, external data replication, and online Kaseya backup.

Student Technician **May 2013 - May 2014**
Toccoa Falls College

- Maintained Staff, Faculty, and Library Computer Technology.
- Responsible for responding to systems down issues in education buildings.
- Contributed to College Research regarding Library and Staff technology integration.

Student Technician **July 2009 - May 2010**
Armstrong Atlantic State University

- Maintained Computer Lab, Staff, and Faculty computer hardware and software.
- Set up and relocated workstations for faculty.
- Resolved issues with computer lab software and hardware for students.

ABOUT ME

I'm a Backend developer with more than 7 years of working experience building Symfony 4-7 PHP architectures. That includes everything that typically comes with the topic, such as docker, databases, hosting, nginx, apache, most Symfony packages, etc.. Alongside that: experience and knowhow with NodeJS frameworks, and Frontend Typescript React Applications, and a bit of Java.

My passion in software development is codebases which are efficient, changeable, readable, and scalable. I am a big fan and advocate of OOP, SOLID, and Domain Driven Design principles (and therefore refactoring). I am currently looking primarily for remote-only jobs.

Apart from writing code, my passions lie in philosophy, history, language-learning, culture, and hiking. On the weekends I can usually be found outside on a trail with my wife, reading a good book, writing an essay. Or, of course, working on a software project which aims to help me or others to live and express aristotelian principles of virtue and study.

EDUCATION

Engineering Immersion Graduate **November 2017 - May 2018**
Thinkful

- Full Stack Engineering course specializing in best practice MongoDB, PostgreSQL Node, Express, React, and Redux application development.
- Emphasis on data science and implementing application data flow with efficiency.

Bachelor of Science in Philosophy **August 2010 - May 2014**
Toccoa Falls College

- Major: Focus on Analytic Philosophy, Philosophy of Religion, Metaphysics, Politics, and Ethics
- Minor: Counseling Psychology

High School Diploma **August 2005 - May 2009**
Savannah Christian Preparatory School

TECHNICAL SKILLS

Database:	PostgresQL, MySQL, MariaDB
Application Logic:	Symfony 4-7, Symfony Internals, Object Serialization, Relationless DB Node.js, Java (a bit)
Frontend:	React.js, Bootstrap, Gatsby, React Router, Redux, jQuery, HTML5, CSS3, ES6 JS
CI & Deploy:	Github Workflow, Gitlab CI, Netlify, AWS S3, Heroku, Docker,
Workflow	Git, Scrum, Github, Gitlab, Bitbucket, Confluence, JIRA
Software Patterns:	CLEAN Code, CQRS, Domain Driven Design, SOLID Architecture
KI:	Github Copilot (IDE + PR Agentic), Claude, Cursor, Context Creation für Agents.

SPOKEN LANGUAGES

English	Native Speaker
German	Fluent

PROJECTS

Habitus — **Symfony 7, pgSQL, DDD CQRS, Relationless DB 2024-Present**

- A user-based set of tools for maintaining an active life of study, writing, and habits, growing out of organic needs and Aristotelian philosophy of *the good life.* A move away from “life-hacking” towards“becoming” and “understanding”.
- All Symfony PHP, highest quality code - Bounded top level DDD Namespaces, validated by PHPStan, Codesniffer, PHP Unit tests, etc.
- Code is proprietary, it may become a marketable project at some point.

Memento Notepad — **React, Draft.js, CQRS, DDD 2021-2022**

- Initially a simple app to test the viability of using such architectural strategies as DDD and CQRS could function in a browser environment, but which eventually became a chrome extension.
- The setup was so extensible and powerful that it allowed for the implementation of a large range of features, such as scheduled tasks, short cut tasks, backup creation and restoration, and delayed persistence of notes. The Layered architecture was very enjoyable to work with.
- At the most basic level, memento is an aesthetically pleasing and simple notepad that opens on each new tab in Chrome.

Time Interval JS — **Typescript, Npm 2020**

- NPM package for managing and making assertions against time relationships between Date objects.
- Modelled after similar PHP libraries for calculating time between dates in meaningful units.
